01

What Is Biology?

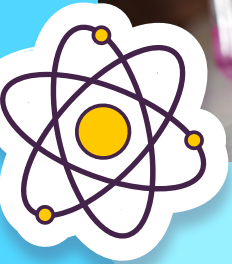

◊ **Biology is...**

like a big book
about living things!

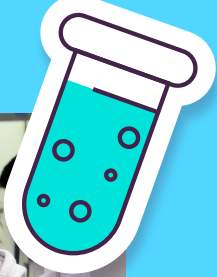

02

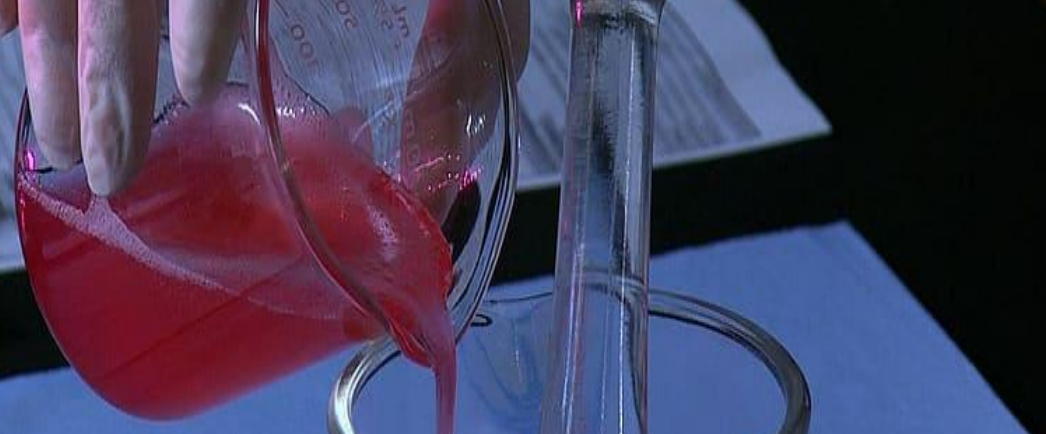

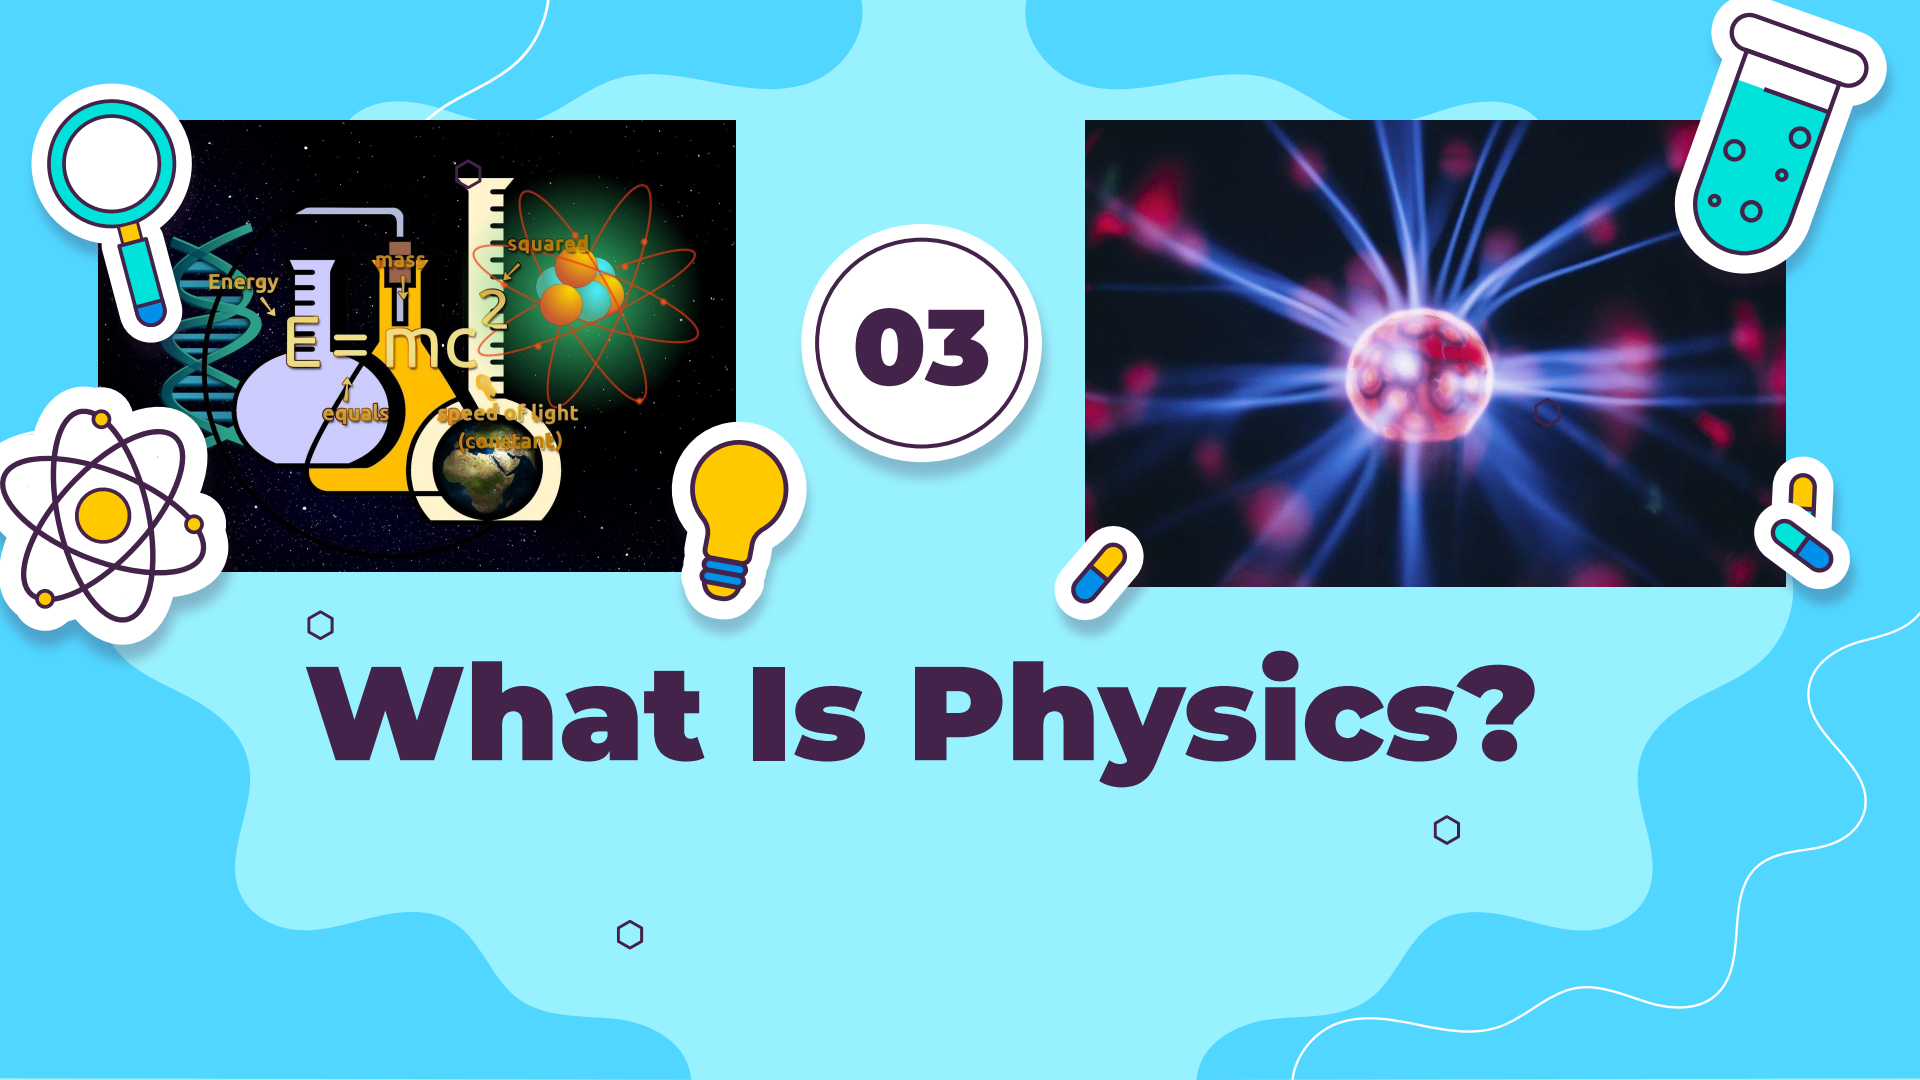

What Is Chemistry?

Chemistry is...

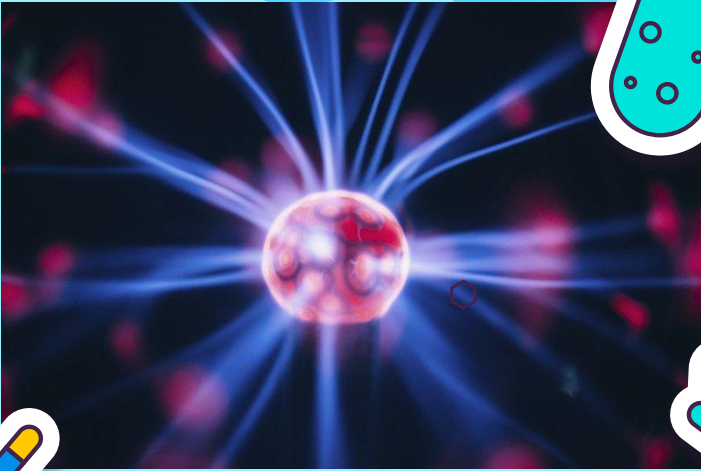

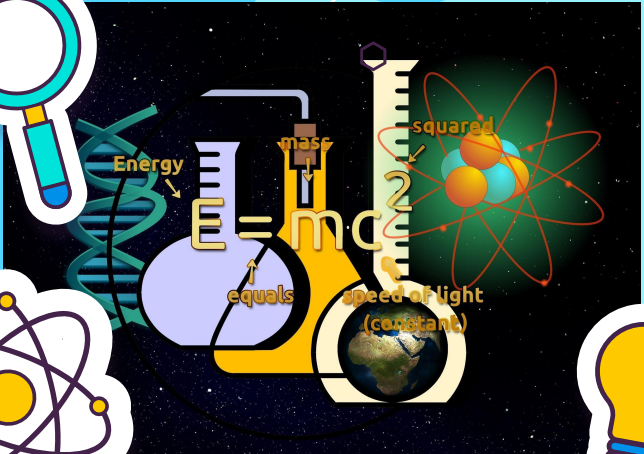

like magic mixing!
It's about stuff you
can touch and
change

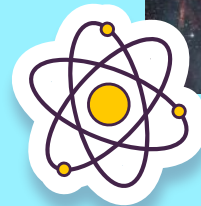

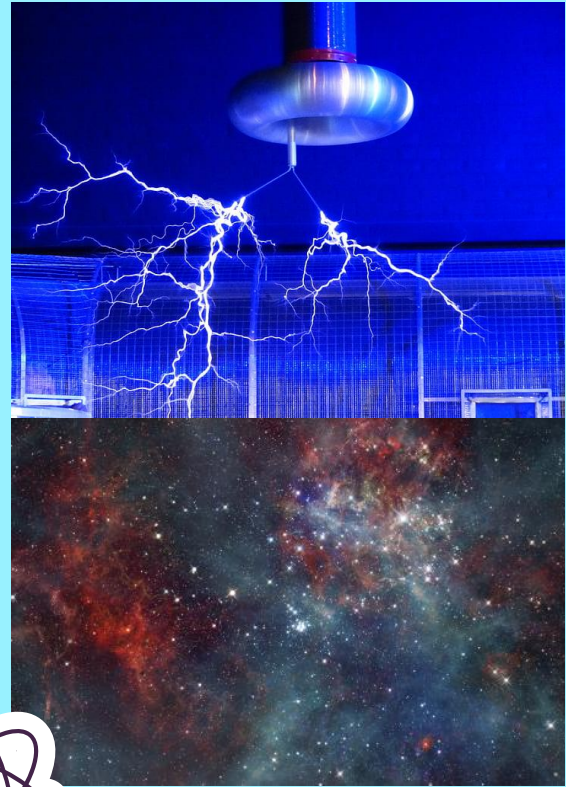

03

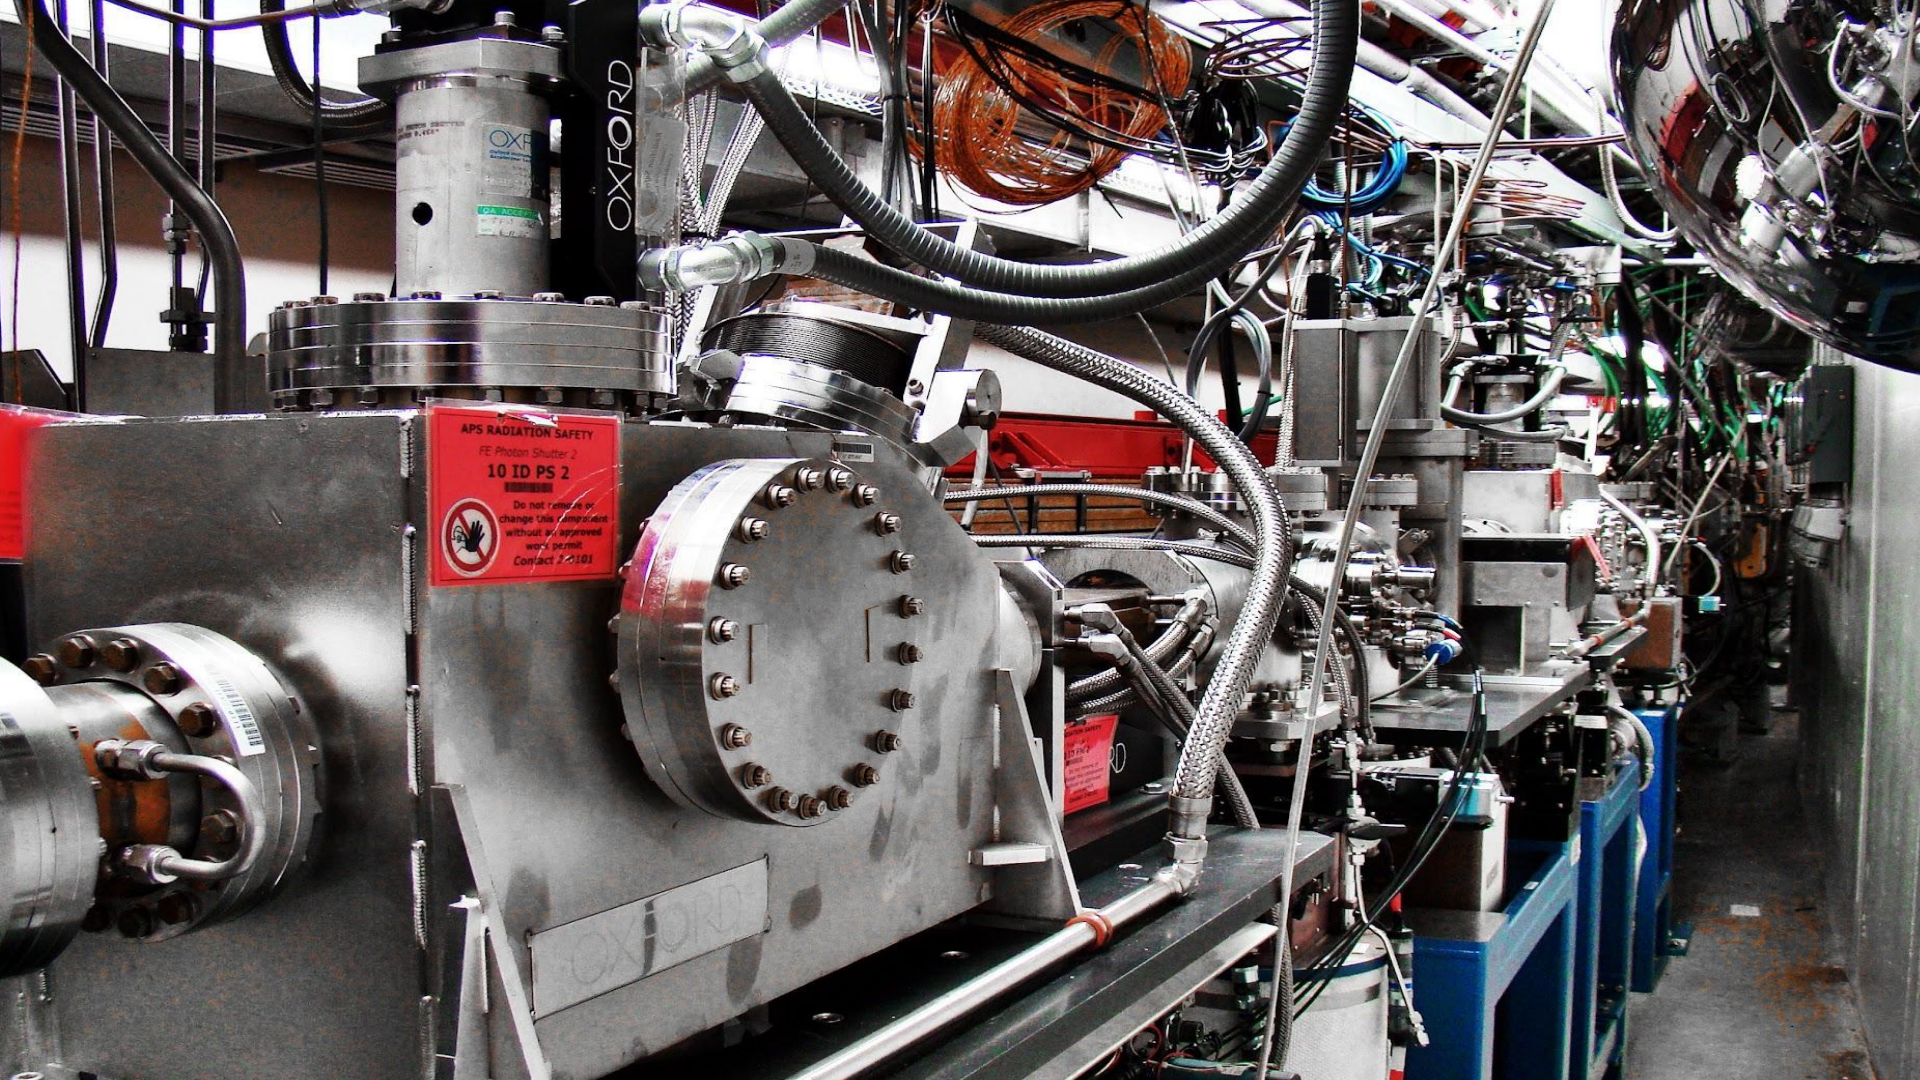

What Is Physics?

Physics is...

like the secret
rules of how things
move and work!

OXFORD

OXFORD

A bright blue sky with scattered white clouds. The clouds are of various sizes and shapes, some appearing as soft, fluffy patches while others are more defined and wispy. The overall scene is bright and clear, suggesting a sunny day.

Ever Dreamed of Flying in the Sky ?

Ever Dreamed of Flying in the Sky ?

**Because of
Gravity !**

Once upon a time, a very clever scientist named Isaac Newton lived long ago. He was sitting under an apple tree...

Guess what happened?

**An apple fell right from
the tree and bonked him
on the head! Ouch!**

Even though his head hurt a bit, Newton was super smart and curious! He started wondering why the apple went down instead of up.

Why is the apple went down instead of up ?

**Because of
Gravity !**

**Let's learn
about Gravity !**

Gravity is a special invisible force that pulls everything towards the ground

THINK TIME

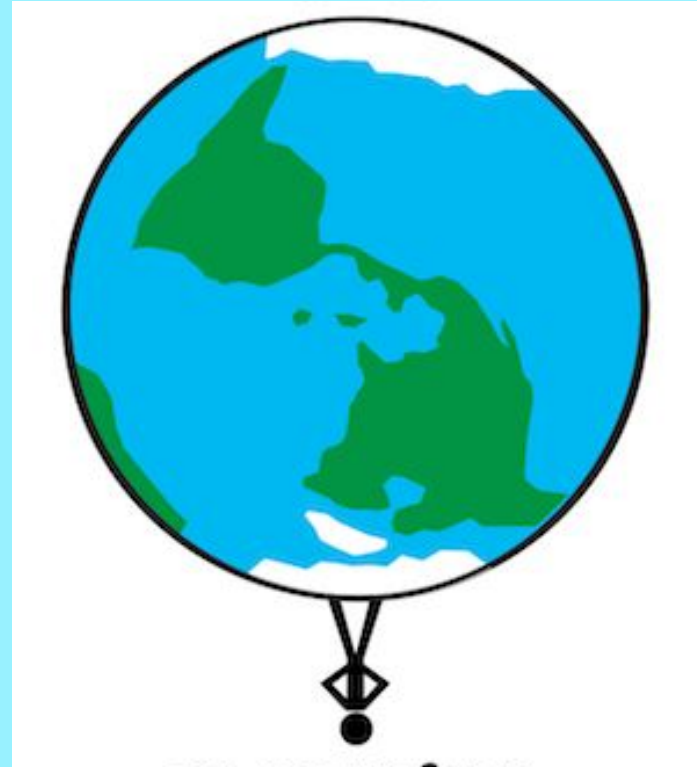

What do you know about gravity? Why is it important?

Gravity Keeps Us Grounded

Gravity is a force of attraction between objects with mass.

Gravity is like a big invisible hug that pulls everything together. Everything with weight, even your toys, the trees, and even the Earth, pulls things closer together with this invisible hug called gravity!

EVERYTHING

Everything that has mass has gravity

Why can we only feel the Earth's gravity?

**Because the gravity of
Earth is because Earth is
really, really big!**

**The greater the mass
The greater the gravity**
